

Dear \_\_\_\_\_:

As your current primary care physician it is our responsibility to ensure you are receiving quality medical care. As part of providing you with quality medical care, it is recommended that all patients with asthma develop a written asthma action plan with their physician.

Proper management of your asthma can help you learn how to reduce your symptoms and improve your quality of life. Whether you have symptoms every day or only occasionally, both children and adults can get the tools they need to better manage their asthma. Using a written asthma action plan is often one of the tools used.

Our records indicate that **you have not developed a written asthma action plan or completed an asthma control test** with us during the 2009 calendar year.

### **What you need to do:**

Call our office to schedule an appointment immediately so that we can develop your asthma action plan together.

- Our office telephone number is:

\_\_\_\_\_

Sincerely,
